

# Insertion Sort

CS110C

Max Luttrell, CCSF

# insertion sort

- Take the first item from the unsorted region, and **insert** it into the correct space in the sorted region
- In the beginning, the sorted region is simply the first element (an array with one element is always sorted)

# insertion sort

# insertion sort

Initial array:

Copy 10

Shift 29

Insert 10; copy 14

Shift 29

Insert 14; copy 37, insert 37 on top of itself

Copy 13

Shift 37, 29, 14

*Blue: sorted -- White: unsorted*

# insertion sort

Initial array:

Sorted array:

Copy 10

Shift 29

Insert 10; copy 14

Shift 29

Insert 14; copy 37, insert 37 on top of itself

Copy 13

Shift 37, 29, 14

Insert 13

*Blue: sorted -- White: unsorted*

```
void insertionSort(int theArray[], int n)
{
    // unsorted = first index of the unsorted region,
    // loc = index of insertion in the sorted region,
    // nextItem = next item in the unsorted region.
    //
    // Initially, sorted region is theArray[0],
    // unsorted region is theArray[1..n-1].
    // In general, sorted region is theArray[0..unsorted-1],
    // unsorted region theArray[unsorted..n-1]
    for (int unsorted = 1; unsorted < n; unsorted++)
    {
        // At this point, theArray[0..unsorted-1] is sorted.
        // Find the right position (loc) in theArray[0..unsorted]
        // for theArray[unsorted], which is the first entry in the
        // unsorted region; shift, as necessary, to make room
        int nextItem = theArray[unsorted];
        int loc = unsorted;
        while ((loc > 0) && (theArray[loc - 1] > nextItem))
        {
            // Shift theArray[loc - 1] to the right
            theArray[loc] = theArray[loc - 1];
            loc--;
        } // end while

        // At this point, theArray[loc] is where nextItem belongs
        theArray[loc] = nextItem; // Insert nextItem into sorted region
    } // end for
} // end insertionSort
```
